

# Data Wrangling

## Steps:

- First we delete some values from our dataset
- Then we started the code by importing libraries (pandas, matplotlib, numpy)
- Replace missing values by doing drop
- Convert object format to another correct form which is float
- Visualisation data by using min-max
- We Binned data (Remote\_Working\_Ratio column) to (Low,medium,high)

We replace commas by dot and it works then it gave us error

Here is a picture when it worked
